

Apache JMeter Load Testing

I performed basic load testing using Apache JMeter by creating a test plan with HTTP requests and analyzing responses using listeners.

Here, I created a test plan in JMeter, and an HTTP Request sampler was added to send multiple requests to the server. Load testing was then performed, and the results were analyzed using the View Results Tree listener.

Screenshots:

The View Results Tree listener was used to analyze the response details of each HTTP request executed during the load test. The results showed a response code of 200 (OK), which confirms that the request was successfully processed by the server. The load time recorded was 107 ms with a latency of 45 ms, indicating a fast and stable server response. Additionally, the error count was 0, which confirms that no failures occurred during test execution. These results demonstrate that the application handled the request efficiently and responded correctly under the applied load conditions.

The screenshot shows the Apache JMeter 5.6.3 Summary Report window. The left sidebar lists the test plan components: Test Plan, Load Testing, HTTP Request, View Results Tree, and Summary Report. The main area displays a table of test results for the 'HTTP Request'.

Label	# Samples	Average	Min	Max	Std. Dev.	Error %	Throughput	Received KB/sec	Sent KB/sec	Avg. Bytes
HTTP Request	20	134	105	365	73.31	0.00%	5.2/sec	955.41	1.24	188918.0
TOTAL	20	134	105	365	73.31	0.00%	5.2/sec	955.41	1.24	188918.0

At the bottom of the window, there are checkboxes for 'Include group name in label?' (unchecked), 'Save Table Data' (checked), and 'Save Table Header' (checked).

After running the load test in Apache JMeter, a total of 20 HTTP requests were sent to the server. The average response time was 134 milliseconds, with the fastest response at 105 ms and the slowest at 365 ms. The error rate was 0%, which means all requests were successful. The server handled about 5.2 requests per second. The results show that the application performed well and worked smoothly under the given load.
